AI compliance by design

Practical training and workshop support
to implement AI systems in your business
compliantly

AI compliance by design

AI is increasingly a driving force and a disruptor, reshaping industries and redefining strategies. Staying informed about the latest trends and breakthroughs has never been more critical.

Our 'AI compliance by design' training and workshop is built for all types of businesses looking to understand AI, leading to the development of a strategic action plan for its implementation in your business.

Modules

Awareness training

Our training is designed to provide you with an understanding of AI regulation and compliance, focusing on core concepts with an emphasis on the UK and the EU – the latter being a benchmark for regulatory compliance. We also recognise the importance of the international regulatory landscape and ensure our training encompasses a global perspective.

During the training we explore the AI principles below:

- Safety
- Security and robustness
- Appropriate transparency and explainability
- Fairness
- Accountability and governance
- Contestability and redress
- Social and environmental well being

Throughout the training we use real life examples to demonstrate how you build compliance into your organisation when implementing or using AI. This is designed for anyone in the organisation and we can tailor this towards specific groups if preferred.

This is a 60 minute training session with a 15 minute Q&A built in, and can be delivered in-person or virtually.

Deep dive workshop

Our deep dive workshop can help your business to transition to a phase where you can implement compliant AI systems.

The structured workshop engages your team to explore a specific opportunity for AI application. Our workshops are most impactful when you have a specific idea of how you want to implement AI within your business.

For example, if you are considering rolling out GenAI as part of your customer journey, we will guide you through the specific compliance issues to consider and practical mitigation steps to take, with a focus on IP, data protection, and AI regulation.

Our workshop approach is as follows:

1. Preparation

We will prepare for the workshop by understanding your requirements at a high level, and then creating a specific questionnaire to help to get a greater level of detail. All responses will inform the content and structure of the workshop.

2. Workshop

We will create a bespoke workshop structure and utilise the key items identified in the preparation phase. The workshop typically lasts 90 minutes, and we recommend conducting it face-to-face, although remote sessions are available if preferred.

3. Recommendations

Following the workshop we will produce an action plan summarising and prioritising the output of the workshop and our recommendations for how to compliantly implement AI into your business.

Course leads

[Ashley Williams](#), Partner

Ashley Williams is a Partner and co-leads our Technology Transactions Group. He is a technology lawyer specialising in non-contentious technology and data protection matters. He works with high-growth tech companies and multinational corporations, helping them exploit technology assets and navigate data protection issues.

[Anne Rose](#), Managing Associate

Anne is a Managing Associate in our Technology Transactions Group and co-leads the Blockchain Group. Anne has experience in advising on emerging technologies such as blockchain, artificial intelligence and machine learning, data and privacy issues and a wide range of IT and commercial contracts including IP licences and assignments, franchising, agency, distribution agreements and sponsorship agreements.

[Raj Shah](#), Managing Associate

Raj is also a Managing Associate in the Technology Transactions Group. He provides pragmatic advice to a variety of technology-focused businesses that operate across a range of sectors throughout their business lifecycle, and has a particular focus on AI and machine learning.
